Assignment - 1

1. What are the Products available in the market for Power BI?

    - Power BI Desktop – Used to create reports and dashboards.
    - Power BI Service – Used to publish, share, and collaborate on reports online.
    - Power BI Mobile – Used to view reports and dashboards on mobile devices.
    - Power BI Report Server – Used to store and manage reports within an organization.

2. What are the different steps involved in Power BI workflow Architecture.

    - Data Source: Collect data from Excel, SQL, websites, etc.
    - Data Preparation: Clean and transform the data using Power Query.
    - Data Modelling: Create relationships and calculations between tables.
    - Visualization: Create charts, graphs, and dashboards.
    - Publish & Share: Publish reports to Power BI Service and share them with users.

3. Why Visualisation is major building block of Power BI?

    Visualization is important because it **turns complex data into simple and understandable information**. Charts, graphs, and dashboards help users quickly identify **trends, patterns, and problems**, making better decisions.

4. Explain any 3 key benefits of Power BI in data analytics domain.

    i. **Easy to use:** Users can create reports and dashboards without advanced programming knowledge.

    ii. **Better decision-making:** Data is presented visually, making important trends and insights easier to understand.

    iii. **Connects multiple data sources:** Power BI can combine data from Excel, databases, cloud services, and many other sources.

5. What are the different responsibilities of Power BI developer in the market.

    A Power BI Developer mainly:

- Collects and cleans data from different sources.
- Creates data models, dashboards, and reports.
- Develops DAX calculations and measures.
- Maintains and updates Power BI reports.
- Works with business teams to understand their data requirements.
- Publishes and manages reports in Power BI Service.
