1.Power BI can connect to many different types of data sources. Some common ones are:

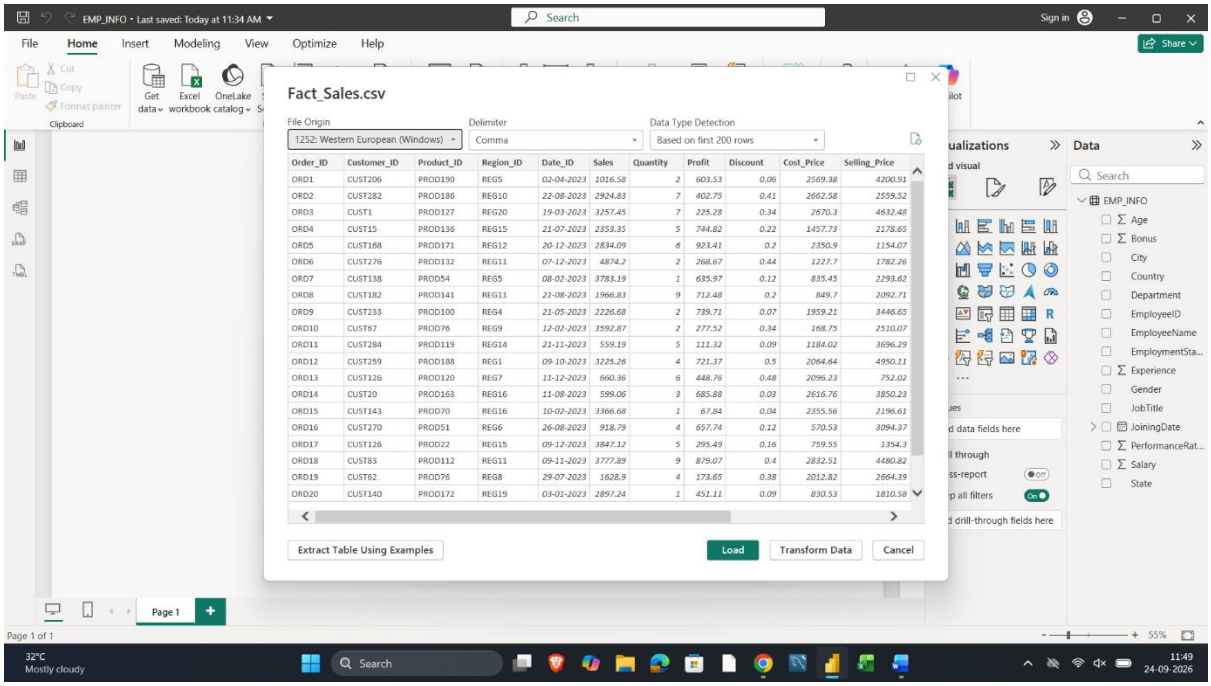

- **Excel Workbook** – Connect to Excel files.
- **Text/CSV files** – Import data from CSV or text files.
- **MySQL** – Connect to MySQL databases.

2.Power BI Dataset is now called a Power BI Semantic Model.

3. The main components/views of Power BI Desktop are:

1. Report View
2. Table/Data View
3. Model View
4. Power Query Editor
5. DAX (Data Analysis Expressions)

4. Power BI consists of several components that work together to create meaningful reports and dashboards.

Report View is used to create charts, graphs, tables, and other visualizations.

Table/Data View is used to view and inspect the data loaded into Power BI.

Model View is used to create relationships between different tables and organize the data model.

DAX (Data Analysis Expressions) is used to create calculations, measures, and calculated columns for data analysis.
