1. Calculate Total SalesAmount

In **Power BI Desktop**:

1. Open the Contoso Sales .pbix file.
2. Go to **Modeling → New measure**.
3. Enter: Total SalesAmount = SUM(Sales[SalesAmount])
4. Press **Enter**.
5. Add a **Card visual** to the report.
6. Drag Total SalesAmount into the Card.

This displays the total sales amount.

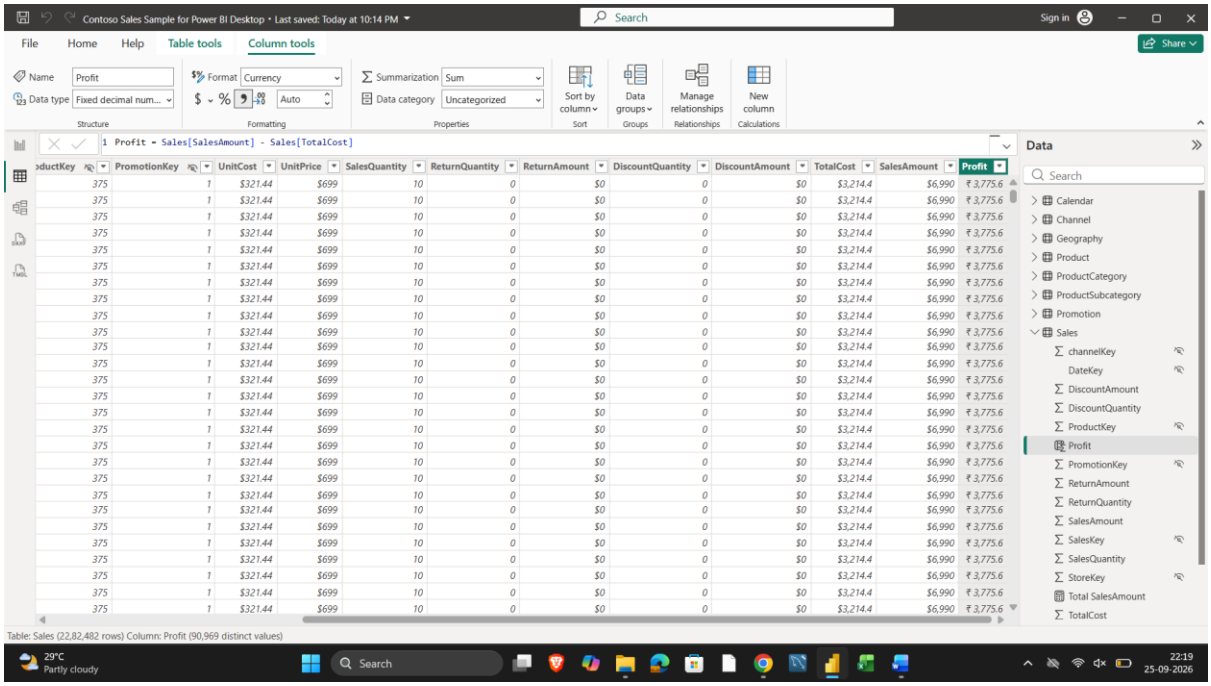

2. Create Profit column

Go to **Modeling → New column** and enter:

Profit = Sales[SalesAmount] - Sales[TotalCost]

This calculates profit for each row:

3. Calculate total profit for Product Key 800

First create the profit measure:

Total Profit = SUM(Sales[Profit])

Then create another measure:

Profit Product 800 =

CALCULATE(

    [Total Profit],

    Sales[ProductKey] = 800

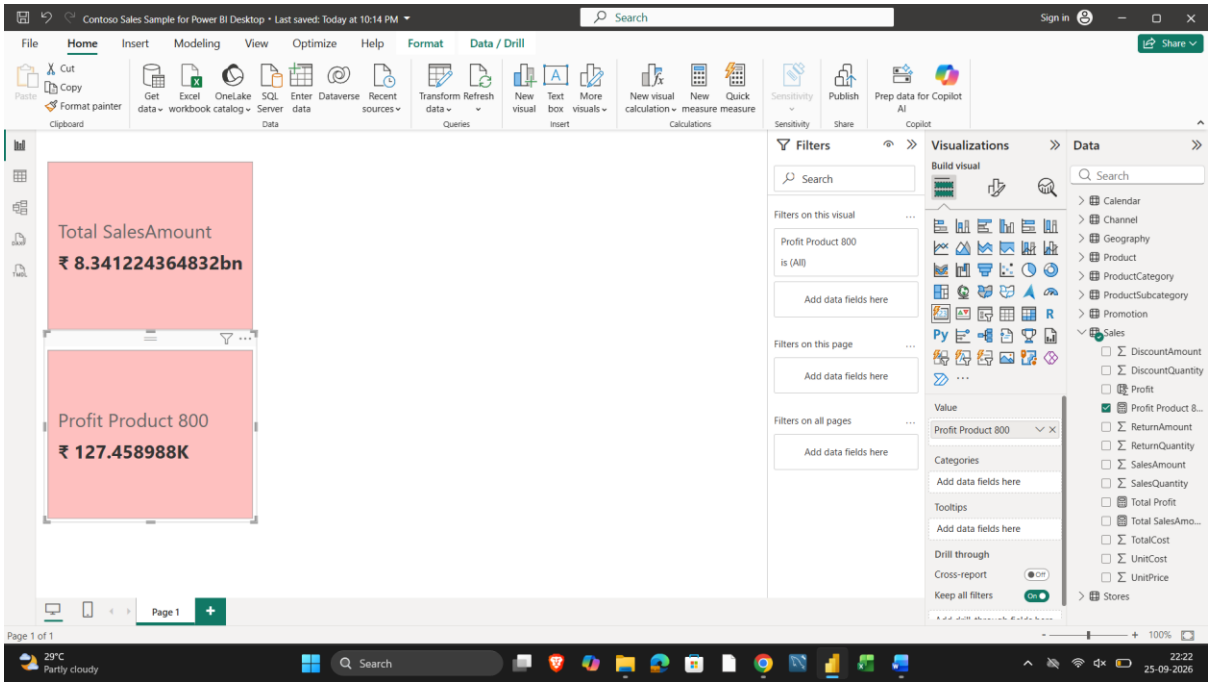

)

Add Profit Product 800 to a **Card visual**.

That card will show the total profit for **ProductKey 800**.

4. Replace "Contoso Ltd" with "Contoso Pvt Ltd"

If the manufacturer column is called Manufacturer, create a **new column**:

```
Manufacturer_New =
SUBSTITUTE(
    Sales[Manufacturer],
    "Contoso Ltd",
    "Contoso Pvt Ltd"
)
```

This changes only the specified text.

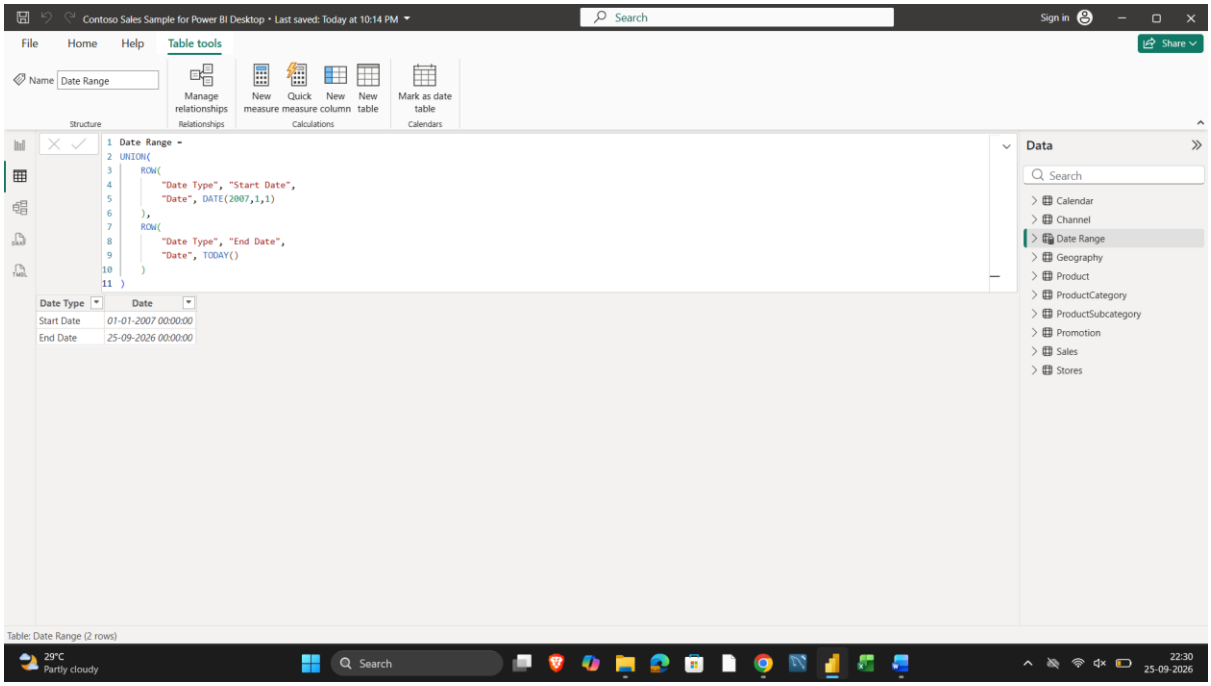

5. Create a table with start date and today's date

Go to **Modeling → New table**.

If your dataset's starting date is, for example, 01-Jan-2007, you can create:

```
Date Range =
DATATABLE(
    "Date Type", STRING,
    "Date", DATE,
    {
        {"Start Date", DATE(2007,1,1)},
        {"End Date", TODAY()}
    }
)
```

6. Division operation for Product Key 800

Create a measure:

Sales Cost Division =

DIVIDE(

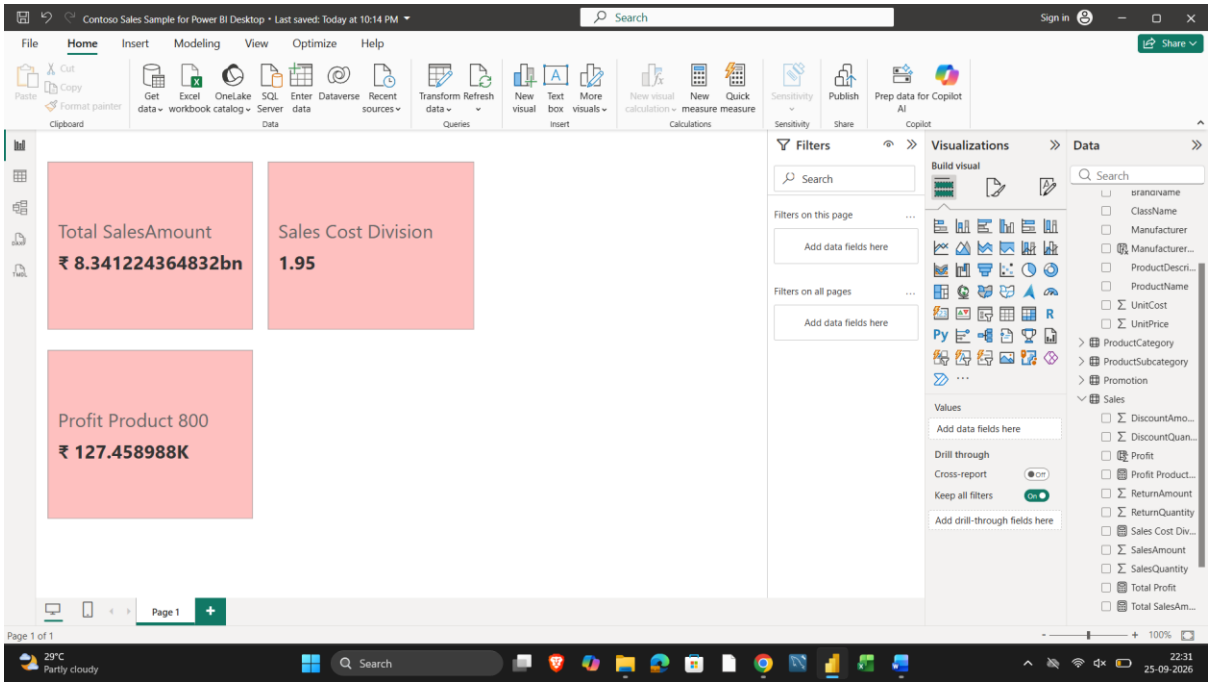

CALCULATE(SUM(Sales[SalesAmount]), Sales[ProductKey] = 800),

CALCULATE(SUM(Sales[TotalCost]), Sales[ProductKey] = 800)

)

This calculates:

SalesAmount ÷ TotalCost for ProductKey 800
