1. Different charts in Power BI

Power BI supports Bar, Column, Line, Pie, Donut, Area, Scatter, Funnel, Treemap, Waterfall, Ribbon, and Combo charts.

2. When to use which chart?

- Bar/Column: Compare categories – *Sales by Product*.
- Line: Show trends – *Monthly Sales*.
- Pie/Donut: Show percentages – *Sales by Region*.
- Scatter: Show relationships – *Sales vs Profit*.
- Funnel: Show stages – *Sales Pipeline*.
- Treemap: Show hierarchical data – *Sales by Category*.

3. Matrix vs Table Visual

A Table shows data in simple rows and columns. A Matrix supports hierarchies, grouping, subtotals, and drill-down, similar to an Excel PivotTable.
